

The Definitive Guide to Enterprise Data Masking

Data masking is the process of creating a fake, but realistic version of your organizational data.

The goal is to protect sensitive data, while providing a functional alternative when real data is not needed—for example, in user training, sales demos, or software testing.

This whitepaper covers:

1. The cost of data breaches in 2026.
2. Techniques like deterministic masking and format-preserving encryption.
3. How OwlMask automates compliance with GDPR and HIPAA.
